Subject: alton coal mine proposal

I am sending this email message to express my concern for permitting the Alton Coal mine (Coal Hollow).

I own a historic pioneer home built in 1897 in Panguitch. Panguitch is a National Historic District. I am concerned this coal mine will have severe impacts on the existing historic quality and ability to preserve the historic quality of Panguitch because of the haul route associated with the mining proposal. My home is located one block from Highway 89 where a coal truck is projected to travel through the Historic District every 4 minutes every day, all day. How can this level of traffic, vibration, and noise be consistent with preserving the historic values associated with a National designation? I suggest this level of disturbance is not and cannot be consistent with the National Historic District designation.

Thank you for considering these concerns while evaluating the merits of the Alton Coal mine.
